

The diagram illustrates a medical information system architecture with three main components: a Patient PDA, a Physician Computer, and a Patient Computer. The Patient PDA (labeled 2) contains Patient PDA Software (labeled 16). The Physician Computer (labeled 6) contains Physician Software (labeled 14) and a Patient Database (labeled 18). The Patient Computer (labeled 4) contains Patient Desktop Software (labeled 12). The Patient PDA is connected to the Physician Computer via a thick line (labeled 8) and to the Patient Computer via a thick line (labeled 10). The connections are represented by thick lines with a zigzag pattern, indicating a network or data link.
